

Profile

How I would contribute

Operator-technologist who turns emerging technology into adopted operating mechanisms.
Hands-on experience designing AI-enabled workflows, clarifying human authority, connecting technical and business teams, building standards and feedback loops, and measuring work through cycle time, labor avoided, quality, rework, traceability, and retained use.

Convert messy People and Recruiting friction

Role-aligned capabilities

AI workflow and agent patterns

Process discovery and redesign

Human-in-the-loop authority

Knowledge and context architecture

Automation opportunity evaluation

Cross-functional build partnership

Adoption, training, and standard work

Operational metrics and feedback

into durable, documented workflows with clear sources, mechanism choice, retained human authority, fallback, ownership, operating proof, and maintenance.

Technical toolkit

Experience

Vape-Jet — Director of Operations 2025–Present

Leads hands-on AI-first operating transformation across production, purchasing, quality, customer success, support, engineering issue flow, Odoo, Jira, HubSpot, Slack, telemetry, and AI-assisted workflows.

Connects factory, field, customer, and machine-fleet signals into prioritized work, earlier risk

detection, cleaner handoffs, dashboards, standard work, training, and accountability.

Agentic AI · LLM workflows · RAG patterns ·

Human-in-the-loop design · Python · SQL ·

JavaScript · TensorFlow · Tableau · Odoo ·

Jira · Confluence · HubSpot · Slack

Selected credentials

Google AI Essentials

IBM Enterprise Design Thinking

Practitioner

Six Sigma Certification

OSHA 10

Works inside a software-enabled robotics and machine-vision environment with approximately

1,000 fielded robots informing support and operating feedback loops.

DudeWorth — Founder / AI and Automation Advisor 2017–Present

Develops AI-readiness and opportunity frameworks spanning business value, feasibility, data

readiness, governance, adoption burden, reuse, and time-to-value.

Designs agentic workflow patterns using structured context, retrieval, AI agents, human

judgment, escalation, decision records, evaluation, and governance rails.

Advises on AI-enabled operations, logistics technology, warehouse automation,

AMRs, ASRS,

cobots, transportation systems, network analysis, and workflow design.

Amazon — Operations Management / Site Leader 2014–2018

Led launch and execution for Amazon Prime Pittsburgh in a 24/7

customer-backward

environment supporting approximately five million second-day orders annually.

Built leadership routines, labor planning, throughput visibility, escalation paths, standard work, and operating mechanisms; applied Lean and Gemba across safety, quality, throughput, customer experience, and engagement.

Served on the Amazon Prime Now launch team with Whole Foods and contributed to logistics

innovation through Prime Air research and Amazon Flex geolocation concepts.

Additional experience

People automation operating

Compunetics — Director of Operations and Engineering Management 2000–2013

judgment
Use process redesign when

Progressed through R&D program management, production management, strategic acquisition, operations management, and director-level leadership.

ownership or the work itself is

Led engineering, manufacturing, quality, customer delivery, and complex technical programs in advanced electronics and high-reliability environments.

Use deterministic automation for

Built quality systems, standard work, root-cause practices, performance measures, and process controls; collaborated with high-consequence customers and partners including DoD, CERN, Intel, and AMD.

Published industry articles, delivered technical talks, and participated in the HyperTransport Consortium.

Cardinal Building Products — Regional Director 2021–2023

Built the company's first remote regional operation and modernized distributed customer, CRM, commercial, fulfillment, logistics, digital marketing, SEO, and online-buying workflows.

unclear.
stable rules and repeatable actions.
Use scripts and integrations for data movement, validation, and reconciliation.

Use AI for ambiguity, context synthesis, language, and bounded assistance.

Keep high-impact People decisions and sensitive exceptions humanowned.

Advanced AI-enhanced transportation-management and route-planning concepts.

ZeusVu — Chief Pilot, Autonomous Systems and Aerial Data Operations

Education

2018–2022

Led regulated drone operations across medical, energy, logistics, real-estate, and restrictedairspace contexts with a 100% safety record and no FAA incidents.

University of Pittsburgh

Developed TensorFlow-based concepts for automated aerial inventory and computer-visionenabled field intelligence; designed medical delivery and chain-of-custody concepts connecting technology, risk, stakeholders, and governed execution.

Academic grounding includes materials science, physical chemistry, and biology-

Bachelor of Science

related studies.

Enviro Social Capital — Chairman of the Board 2014–2017

Co-founded and led a public-private impact initiative focused on sustainable infrastructure, green finance, and civic transformation; helped shape and evaluate a \$200 million Social Impact Bond feasibility concept.

IEEE — CMPT and EDS Pittsburgh Chapter Chair 2012–2016

Additional credential

Food Safety Management Certification

Led regional technology programming connecting industry, academia, STEM outreach, electronics, manufacturing, and emerging technology.

Working style

Selected operating mechanisms

Bias for action, visible assumptions, small

Visible work

Quality and recovery

bounded tests, documented ownership,

Turns fragmented signals into dashboards, prioritized work, clear handoffs, standard work, and accountable review.

Uses root cause, process controls, traceability, escalation, and feedback loops to repair recurring failures rather than hide them.

users and real work.

Adoption and learning

Cross-functional translation

Pairs new workflows with training, user feedback, practical governance, iteration, and measures of retained use.

Connects operators, technical teams, systems owners, customers, and leaders around one observable operating outcome.

practical governance, and feedback from real
