## Profile

Operator-technologist who turns emerging technology into adopted operating mechanisms. Hands-on experience designing AI-enabled workflows, clarifying human authority, connecting technical and business teams, building standards and feedback loops, and measuring work through cycle time, labor avoided, quality, rework, traceability, and retained use.

## Role-aligned capabilities

AI workflow and agent patterns

Process discovery and redesign

Human-in-the-loop authority

Knowledge and context architecture

Automation opportunity evaluation

Cross-functional build partnership

Adoption, training, and standard work

Operational metrics and feedback

## How I would contribute

Convert messy People and Recruiting friction into durable, documented workflows with clear sources, mechanism choice, retained human authority, fallback, ownership, operating proof, and maintenance.

## Technical toolkit

Agentic AI · LLM workflows · RAG patterns · Human-in-the-loop design · Python · SQL · JavaScript · TensorFlow · Tableau · Odoo · Jira · Confluence · HubSpot · Slack

## Experience

### Vape-Jet — Director of Operations 2025–Present

- Leads hands-on AI-first operating transformation across production, purchasing, quality, customer success, support, engineering issue flow, Odoo, Jira, HubSpot, Slack, telemetry, and AI-assisted workflows.
- Connects factory, field, customer, and machine-fleet signals into prioritized work, earlier risk detection, cleaner handoffs, dashboards, standard work, training, and accountability.
- Works inside a software-enabled robotics and machine-vision environment with approximately 1,000 fielded robots informing support and operating feedback loops.

### DudeWorth — Founder / AI and Automation Advisor 2017–Present

- Develops AI-readiness and opportunity frameworks spanning business value, feasibility, data readiness, governance, adoption burden, reuse, and time-to-value.
- Designs agentic workflow patterns using structured context, retrieval, AI agents, human judgment, escalation, decision records, evaluation, and governance rails.
- Advises on AI-enabled operations, logistics technology, warehouse automation, AMRs, ASRS, cobots, transportation systems, network analysis, and workflow design.

### Amazon — Operations Management / Site Leader 2014–2018

- Led launch and execution for Amazon Prime Pittsburgh in a 24/7 customer-backward environment supporting approximately five million second-day orders annually.
- Built leadership routines, labor planning, throughput visibility, escalation paths, standard work, and operating mechanisms; applied Lean and Gemba across safety, quality, throughput, customer experience, and engagement.
- Served on the Amazon Prime Now launch team with Whole Foods and contributed to logistics innovation through Prime Air research and Amazon Flex geolocation concepts.

## Selected credentials

- Google AI Essentials
- IBM Enterprise Design Thinking Practitioner
- Six Sigma Certification
- OSHA 10

## Additional experience

### Compunetics — Director of Operations and Engineering Management 2000–2013

- Progressed through R&D program management, production management, strategic acquisition, operations management, and director-level leadership.
- Led engineering, manufacturing, quality, customer delivery, and complex technical programs in advanced electronics and high-reliability environments.
- Built quality systems, standard work, root-cause practices, performance measures, and process controls; collaborated with high-consequence customers and partners including DoD, CERN, Intel, and AMD.
- Published industry articles, delivered technical talks, and participated in the HyperTransport Consortium.

### Cardinal Building Products — Regional Director 2021–2023

- Built the company's first remote regional operation and modernized distributed customer, CRM, commercial, fulfillment, logistics, digital marketing, SEO, and online-buying workflows.
- Advanced AI-enhanced transportation-management and route-planning concepts.

### ZeusVu — Chief Pilot, Autonomous Systems and Aerial Data Operations

2018–2022

- Led regulated drone operations across medical, energy, logistics, real-estate, and restricted-airspace contexts with a 100% safety record and no FAA incidents.
- Developed TensorFlow-based concepts for automated aerial inventory and computer-vision-enabled field intelligence; designed medical delivery and chain-of-custody concepts connecting technology, risk, stakeholders, and governed execution.

### Enviro Social Capital — Chairman of the Board 2014–2017

- Co-founded and led a public-private impact initiative focused on sustainable infrastructure, green finance, and civic transformation; helped shape and evaluate a \$200 million Social Impact Bond feasibility concept.

### IEEE — CMPT and EDS Pittsburgh Chapter Chair 2012–2016

- Led regional technology programming connecting industry, academia, STEM outreach, electronics, manufacturing, and emerging technology.

## Selected operating mechanisms

### Visible work

Turns fragmented signals into dashboards, prioritized work, clear handoffs, standard work, and accountable review.

### Quality and recovery

Uses root cause, process controls, traceability, escalation, and feedback loops to repair recurring failures rather than hide them.

### Adoption and learning

Pairs new workflows with training, user feedback, practical governance, iteration, and measures of retained use.

### Cross-functional translation

Connects operators, technical teams, systems owners, customers, and leaders around one observable operating outcome.

### People automation operating judgment

- Use process redesign when ownership or the work itself is unclear.
- Use deterministic automation for stable rules and repeatable actions.
- Use scripts and integrations for data movement, validation, and reconciliation.
- Use AI for ambiguity, context synthesis, language, and bounded assistance.
- Keep high-impact People decisions and sensitive exceptions human-owned.

### Education

**University of Pittsburgh**  
Bachelor of Science

Academic grounding includes materials science, physical chemistry, and biology-related studies.

### Additional credential

Food Safety Management Certification

### Working style

Bias for action, visible assumptions, small bounded tests, documented ownership, practical governance, and feedback from real users and real work.
